Intelligently Developed Evidentially Sound

DIGITAL MOBILE DEVICE DATA EXTRACTION FOR THE FRONTLINE

ACESO Intelligently developed for evidence capture

COMPREHENSIVE AND EVIDENTIALLY-SOUND DATA EXTRACTION FROM MOBILE PHONES, GPS DEVICES, SIM AND MEDIA CARDS

Mobile phones and devices are used extensively for accessing, storing and sharing information, which means that they are increasingly used at all levels of criminal activity.

EXAMINE more mobile devices, more quickly

Aceso empowers police officers with the ability to examine and interrogate phones and other mobile devices, quickly and accurately. Aceso makes the process of examination feasible and cost-effective for both high level, serious crime and low level, high volume crime.

CAPTURE valuable intelligence and evidence

By taking mobile device examination away from high tech crime specialists and delivering it into the hands of

frontline police officers, Aceso enables police forces to capture large volumes of evidentially-sound data. This ultimately leads to increased rates of arrest and lower crime statistics.

ACT while the chain of evidence is live

The value of intelligence and evidential data deteriorates rapidly once a phone has been seized; Aceso enables officers to act on information contained within a device - while a suspect is still in custody.

IDENTIFY additional lines of enquiry

Using recovered call registers, photographs, videos, SMS, email and even social networking data retrieved by Aceso, officers can obtain information that would otherwise be unavailable. This data can lead to additional cause for arrest and the identification of associates and other people of interest.

Proven to reduce the cost of mobile phone examination
One ACESO, unlimited phone examinations

RADIOTACTICS

Intelligently Developed Evidentially Sound

EASY-TO-USE, FULLY-GUIDED ACQUISITION
PROCESS, SUITABLE FOR USERS
OF ALL LEVELS OF TECHNICAL ABILITY

**AN EASY-TO-USE, FULLY-GUIDED ACQUISITION PROCESS,
SUITABLE FOR USERS OF ALL LEVELS OF TECHNICAL ABILITY**

**THE MOST COMPREHENSIVE AND EVIDENTIALLY-PROVEN
REPORTING OF DATA ACQUIRED FROM MOBILE DEVICES**

**UNRIVALLED AND ONGOING COMPATIBILITY TESTING FOR
GSM, CDMA AND GPS MOBILE DEVICES**

Unrivalled device support, including Chinese and grey market mobile phones.

Database of over 4000 GSM, GPS and CDMA devices including 2200 supported and 870 fully validated devices.

Generic support allows the acquisition of unlisted devices using manufacturer protocols, which extend the support for mobile devices further still.

Capabilities

Optimise acquisition time by file filtering.

Allows the operator to filter out irrelevant media, such as music files, which rapidly reduces the time taken to extract valuable data.

Fully customisable to be used in-line with users' standard operating procedures to ensure Aceso's full potential can be leveraged.

Training and sustainment

Radio Tactics provides bespoke training and through life capability management to suit customer needs.

Features

Safely block network access using our patent pending Handset Access Card.

SIM-less handset acquisition.

Data capture from devices such as sat navs and flash media.

Metadata access.

Extracts critical details, including time and date, geotagging and make and model of device used.

Logical acquisition of data from device and memory card.

Easy-to-use, fully guided process.

Suitable for users of all levels of technical ability.

Simple touch-screen technology.

Intelligence and data capture from smart phones and social media communications.

High levels of security and integrity.

All data is stored in AES-encrypted format.

Secure key-card login.

Provides complete audit trail of who, what and when the acquisition took place.

Complete set of cables and peripherals.
