

Athena Update Enables Users to Perform Physical Data Extractions

- Radio Tactics' Athena provides rapid in-field data extraction from mobile digital devices, SIM and media cards
- Athena can now extract deleted files as well as system and OS files using logical analysis
- Radio Tactics provides cutting edge evidence and intelligence gathering technology for law enforcement agencies and the military

London, 7th December 2010

Radio Tactics Ltd www.radio-tactics.com, specialist innovator of high-tech digital evidence and intelligence gathering solutions has updated Athena, enabling users to carry out physical as well as logical data extractions. Athena is now able to extract a physical image of the internal memory of a portable electronic device. This step further enhances the capability of Athena, a frontline intelligence gathering platform that offers rapid and effective data acquisition from mobile devices in high pressure situations.

Due to customer demand, Radio Tactics has opened up previously restricted functionality in Athena to allow users to extract system and OS files using logical analysis. This means that Athena can now go even further to empower military and covert operatives with real time, actionable intelligence.

Andy Gill, CEO of Radio Tactics commented:

"This announcement reflects the ethos of the Radio Tactics team. We listen to our customers and respond to their needs. Taking on board client feedback has led to our developers opening up this previously undocumented capability in Athena. The environment in which military and security forces operate is constantly changing and we strive to evolve our products to meet their changing demands."

Radio Tactics provides cutting-edge technology for rapid recovery of evidence and intelligence from mobile phones and other portable electronic devices. Military and law enforcement professionals internationally rely on Radio Tactics products for the secure acquisition, migration, and analysis of digital information from smart card and cellular equipment platforms.

The Radio Tactics team offers comprehensive technical assistance to every customer and takes pride in the fact that all of its products can be fully customised to a client's specification, enabling products to work as effectively as possible in every deployment.
